The Ontario Water Resources Act and Regulation 903

Certain provisions of the Ontario Water Resources Act may be relevant to well owners. Some of these are noted below for your information:

Subsection 30 (1) Prohibition respecting the discharge of any material that may impair the quality of water.

Subsection 33.1 (1) The Director may issue orders relating to flowing wells, including to stop the flow of water from wells.

Subsection 34 (1) Prohibition respecting the taking of more than 50,000 litres of water in a day without a permit.

Section 39 Prohibition respecting engaging in the business of constructing wells without a well contractor licence.

Subsection 43 (1) Prohibition respecting working at the construction of wells without a well technician licence.

Regulation 903 under the Ontario Water Resources Act prescribes the minimum construction (including abandonment) requirements as well as outlines the licensing requirements, conditions, and the roles and responsibilities required of licensed well contractors, well technicians, and well owners in supporting the regulation in Ontario. The owner of a well is required to maintain the well at all times after completion in such manner as to prevent the entry of surface water or foreign materials into the well. The well owner is required to abandon (plug) a well that is not used or maintained. The owner may be required to abandon the well in a manner sufficient to prevent impairment of the quality of ground water if salty, sulphurous, or other non-potable water is encountered in the well. For further information on well construction, well maintenance, and well abandonment, and applicable exemptions, please refer to the Ontario Water Resources Act and Regulation 903, available at www.ontario.ca/laws.

Instructions and Explanations for completing a Well Record

- For use in the Province of Ontario only. This document is a permanent legal document. All APPLICABLE sections/fields MUST be completed in full and ALL COPIES MUST be LEGIBLE to avoid delays in processing and to comply with the Regulation 903. Please PRINT if completing by hand.
- 2. The Ministry's copy (top, WHITE) of the Well Record shall be returned to the Wells Help Desk, Ministry of the Environment, Conservation and Parks, 125 Resources Road, Toronto ON M9P 3V6 within thirty (30) days after the date on which the well's structural stage is complete. The PINK copy shall be submitted to the Well Owner within fourteen (14) days after the date on which the well's structural stage is complete. The YELLOW copy is for the Well Contractor. The Well Contractor must retain a copy of the Well Record for a minimum of 2 years for future reference.
- 3. Not shaded fields are COMMON FIELDS and must be completed for all types of work, including abandonment, as applicable. Fields shaded in YELLOW must be completed for construction and alteration work, as applicable.
- 4. All measurements MUST be recorded in the specified unit, metric or imperial. To indicate the unit used, check off the applicable box on the top of the form. Measurements must be reported to 1/10th of a metre if the unit is a metre. All measurements of depth MUST be referenced to ground surface.
- Well Owner's Information: If the well owner is not an individual, circle the word Organization and print the Organization/Company Name in "Last Name/ Organization" field.
- 6. Well Location: Street Number/Name and City/Town/Village must be provided, if available. Geographic Township, Concession and Lot must be reported if the well is located in an area where such information exists. Current Municipality or Township, if reported, should be entered under "County/District/Municipality." UTM Coordinates must be recorded each time a Well Record is completed. Municipal Plan and Sublot Number may be provided, if available.
- 7. Abandonment details must be recorded in the "Overburden and Bedrock Materials/Abandonment Sealing Record" section. Indicate type of sealant used in "General Description" column and complete the "Depth" column.
- 8. Overburden and Bedrock Materials/Abandonment Sealing Record: For each formation encountered during construction, choose words from the lists below that best describe the formation on the basis of general colour, most common material, other materials, and general description of the formation. Print neatly in the correct columns.

Genera	Colours	Materials						Descriptions	
White Grey Blue	Yellow Brown Red	Fill Muck Peat	Silt Gravel Stones	Top Soil Limestone Fine Sand	Coarse Sand Dolomite Shale	Slate Quartzite Granite	Loose Porous Dense	Cemented Layered Soft	Previously Dug or Bored Previously Drilled Wood Fragments
Green	Black	Clay	Boulders	Medium Sand	Sandstone	Greenstone	Packed	Hard	

Clay: Composed of very fine particles. Forms dense hard lumps or clods when dry and a very elastic putty-like mass when wet. It can be rolled between fingers to form a long, flexible ribbon.

Silt: Grain size, midway between sand and clay. It may form clods which, when broken, feel soft and floury. When moist, it will form a cast that can be handled freely without breaking. Rolled between thumb and finger, it will not "ribbon" but will give a broken appearance.

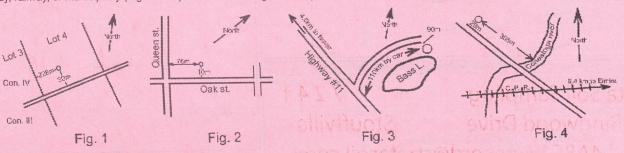

Sand: Grains are loose and granular and may be seen and felt readily. Squeezed in the hand when dry, it falls apart when the pressure is released. Squeezed when moist, it will form a cast that will crumble when touched. Should be listed as fine, medium or coarse.

Gravel: Rock fragments greater than 0.3 cm in diameter.

Example: Overburden and Bedrock Materials Record for construction (measurements recorded in metric)

	THE RESERVE OF THE RESERVE OF		6 - 18 inti	Depth			
General Colours	Most Common Material	Other Materials	General Descriptions	From	То		
Brown	Top Soil			0	0.6		
Grey	Course Sand	Gravel, Silt	Loose, Wood Fragments	0.6	13.0		
Blue	Clay	Silt, Stones	Dense	13.0	25.0		
Brown	Fine Sand	Clay		25.0	31.0		
Grey	Limestone		Porous, Hard	31.0	34.0		

- 9. Water Level measurements in Results of Well Yield Testing: Distance between the surface of the ground and the top of the water in the well.
- 10. Water Details: Depth(s) at which water is found. The distance from the surface of the ground to the water bearing formation, or horizon, where water is found. There may be more than one water bearing formation.
- 11. Map of Well Location: Provide a map showing all property boundaries, and measurements sufficient to locate the well in relations to fixed points including an arrow indicating the North direction. In rural areas, one distance should be taken from a road and the other from either a road or a township lot line (Fig. 1). In a village, town or city, both distances should be taken from named streets (Fig 2). In areas where it is difficult to obtain lot and concession numbers, sufficient information should be supplied in the diagram so that the well can be related to a known unit such as a main highway, railway, or municipality (Figs. 3 & 4). Detailed drawings can be provided as attachments not larger than legal size (8.5" by 14").

Personal information contained on this form is collected pursuant to sections 35-50 and ss. 75(2) of the Ontario Water Resources Act, R.S.O 1990, c.o. 40 and will be used for the purpose of registering your well (and any other public record purpose). Questions about this collection should be directed to the Wells Help Desk, Ministry of the Environment, Conservation and Parks, 125 Resources Road, Toronto ON M9P 3V6 or 1-888-396-9355.

The Ontario Water Resources Act and Regulation 903

Certain provisions of the Ontario Water Resources Act may be relevant to well owners. Some of these are noted below for your information;

Subsection 30 (1) Prohibition respecting the discharge of any material that may impair the quality of water.

Subsection 33.1 (1) The Director may issue orders relating to flowing wells, including to stop the flow of water from wells.

Subsection 34 (1) Prohibition respecting the taking of more than 50,000 litres of water in a day without a permit.

Section 39 Prohibition respecting engaging in the business of constructing wells without a well contractor licence.

Subsection 43 (1) Prohibition respecting working at the construction of wells without a well technician licence.

Regulation 903 under the Ontario Water Resources Act prescribes the minimum construction (including abandonment) requirements as well as outlines the licensing requirements, conditions, and the roles and responsibilities required of licensed well contractors, well technicians, and well owners in supporting the regulation in Ontario. The owner of a well is required to maintain the well at all times after completion in such manner as to prevent the entry of surface water or foreign materials into the well. The well owner is required to abandon (plug) a well that is not used or maintained. The owner may be required to abandon the well in a manner sufficient to prevent impairment of the quality of ground water if salty, sulphurous, or other non-potable water is encountered in the well. For further information on well construction, well maintenance, and well abandonment, and applicable exemptions, please refer to the Ontario Water Resources Act and Regulation 903, available at www.ontario.ca/laws.

Instructions and Explanations for completing a Well Record

- For use in the Province of Ontario only. This document is a permanent legal document. All APPLICABLE sections/fields MUST be completed in full and ALL COPIES MUST be LEGIBLE to avoid delays in processing and to comply with the Regulation 903. Please PRINT if completing by hand.
- 2. The Ministry's copy (top, WHITE) of the Well Record shall be returned to the Wells Help Desk, Ministry of the Environment, Conservation and Parks, 125 Resources Road, Toronto ON M9P 3V6 within thirty (30) days after the date on which the well's structural stage is complete. The PINK copy shall be submitted to the Well Owner within fourteen (14) days after the date on which the well's structural stage is complete. The YELLOW copy is for the Well Contractor. The Well Contractor must retain a copy of the Well Record for a minimum of 2 years for future reference.
- Not shaded fields are COMMON FIELDS and must be completed for all types of work, including abandonment, as applicable. Fields shaded in YELLOW
 must be completed for construction and alteration work, as applicable.
- 4. All measurements MUST be recorded in the specified unit, metric or imperial. To indicate the unit used, check off the applicable box on the top of the form. Measurements must be reported to 1/10th of a metre if the unit is a metre. All measurements of depth MUST be referenced to ground surface.
- 5. Well Owner's Information: If the well owner is not an individual, circle the word Organization and print the Organization/Company Name in "Last Name/Organization" field.
- 6. Well Location: Street Number/Name and City/Town/Village must be provided, if available. Geographic Township, Concession and Lot must be reported if the well is located in an area where such information exists. Current Municipality or Township, if reported, should be entered under "County/District/Municipality." UTM Coordinates must be recorded each time a Well Record is completed. Municipal Plan and Sublot Number may be provided, if available.
- 7. Abandonment details must be recorded in the "Overburden and Bedrock Materials/Abandonment Sealing Record" section. Indicate type of sealant used in "General Description" column and complete the "Depth" column.
- 8. Overburden and Bedrock Materials/Abandonment Sealing Record: For each formation encountered during construction, choose words from the lists below that best describe the formation on the basis of general colour, most common material, other materials, and general description of the formation. Print neatly in the correct columns.

General Colours		Mate	rials	General Descriptions			
White Yellow Grey Brown Blue Red Green Black	Fill Silt Muck Gravel Peat Stones Clay Boulders	Top Soil Limestone Fine Sand Medium Sand	Coarse Sand Dolomite Shale Sandstone	Slate Quartzite Granite Greenstone	Loose Porous Dense Packed	Cemented Layered Soft Hard	Previously Dug or Bored Previously Drilled Wood Fragments

Clay: Composed of very fine particles. Forms dense hard lumps or clods when dry and a very elastic putty-like mass when wet. It can be rolled between fingers to form a long, flexible ribbon.

Silt: Grain size, midway between sand and clay. It may form clods which, when broken, feel soft and floury. When moist, it will form a cast that can be handled freely without breaking. Rolled between thumb and finger, it will not "ribbon" but will give a broken appearance.

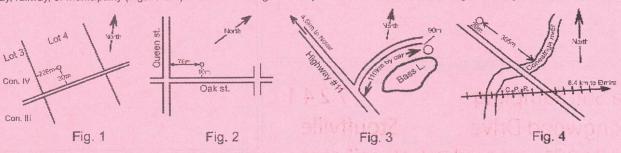

Sand: Grains are loose and granular and may be seen and felt readily. Squeezed in the hand when dry, it falls apart when the pressure is released. Squeezed when moist, it will form a cast that will crumble when touched. Should be listed as fine, medium or coarse.

Gravel: Rock fragments greater than 0.3 cm in diameter.

Example: Overburden and Bedrock Materials Record for construction (measurements recorded in metric)

0 10-1		Otto - Matariala	General Descriptions	Depth			
General Colours	Most Common Material	Other Materials	General Descriptions	From	То		
Brown	Top Soil			0	0.6		
Grey	Course Sand	Gravel, Silt	Loose, Wood Fragments	0.6	13.0		
Blue	Clay	Silt, Stones	Dense	13.0	25.0		
Brown	Fine Sand	Clay		25.0	31.0		
Grey	Limestone		Porous, Hard	31.0	34.0		

- 9. Water Level measurements in Results of Well Yield Testing: Distance between the surface of the ground and the top of the water in the well.
- 10. Water Details: Depth(s) at which water is found. The distance from the surface of the ground to the water bearing formation, or horizon, where water is found. There may be more than one water bearing formation.
- 11. Map of Well Location: Provide a map showing all property boundaries, and measurements sufficient to locate the well in relations to fixed points including an arrow indicating the North direction. In rural areas, one distance should be taken from a road and the other from either a road or a township lot line (Fig. 1). In a village, town or city, both distances should be taken from named streets (Fig 2). In areas where it is difficult to obtain lot and concession numbers, sufficient information should be supplied in the diagram so that the well can be related to a known unit such as a main highway, railway, or municipality (Figs. 3 & 4). Detailed drawings can be provided as attachments not larger than legal size (8.5" by 14").

Personal information contained on this form is collected pursuant to sections 35-50 and ss. 75(2) of the Ontario Water Resources Act, R.S.O 1990, c.o. 40 and will be used for the purpose of registering your well (and any other public record purpose). Questions about this collection should be directed to the Wells Help Desk, Ministry of the Environment, Conservation and Parks, 125 Resources Road, Toronto ON M9P 3V6 or 1-888-396-9355.
