## Section 1: Introduction and Overview

### Greater Peterborough Area Climate Change Action Plan

In 2014, the Greater Peterborough Area's (GPA) member communities joined more than 250 other communities across Canada to address climate change through participation in the Partners for Climate Protection (PCP) program aimed at reducing GHG emissions from both municipal/First Nation corporate operations and community sources.

As part of the PCP program, the Climate Change Action Plan sets a course to reduce local contributions to climate change and prepare communities for present and expected changes that will occur as a result of climate change. This plan represents an integrated approach to dealing with some of the most important issues related to the sustainability of our diverse region. The overall objective of the CCAP is to reduce our greenhouse gas emissions through a reduction in fossil fuel use and lowering our energy consumption, and to better prepare for our changing climate. The Plan identifies strategies, actions, and emission reduction targets that fit with and address the needs of each municipality and First Nation within the GPA. This regionally coordinated approach will ensure that we act together to safeguard the health of our residents and ensure the stability of our local economic and natural resources against impacts related to climate change.

### Climate Change Vision

In 2010, the GPA embarked on an exciting journey – the development of an Integrated Community Sustainability Plan, coined *Sustainable Peterborough*. Within the Sustainable Peterborough Plan, climate change was identified as one of the eleven key theme areas of focus. Each community of the GPA is working together to collectively achieve the following vision, as originally identified as the climate change goal in the Sustainable Peterborough Plan:

*We will reduce our contributions to climate change while increasing our ability to adapt to climate change conditions.*

### Cavan Monaghan's Community and Corporate Action Plans

Chapter 4 of the CCAP includes Cavan Monaghan's Community (Section 2) and Corporate (Section 3) Action Plans. Both of these build on the overarching components outlined in the main CCAP, but provide greater detail specific to Cavan Monaghan. They both include the following:

- *Where are we now* – a brief discussion of community and corporate baseline GHG emissions.
- *Where do we want to go* – GHG emissions reductions targets for the community and corporation.
- *How are we going to get there* – actions that the community and corporation will take to achieve its emissions reduction targets.

## Section 2: Community Action Plan

### Where are we now?

In 2011, 54,531 tonnes of CO<sub>2</sub>e were emitted by the Township of Cavan Monaghan community. Based on the projected growth for the Township of Cavan Monaghan, community emissions are expected to grow to 64,755 tonnes CO<sub>2</sub>e by 2031 if nothing is done to reduce GHG emissions. For further details on the Cavan Monaghan’s baseline community emissions (PCP Milestone 1), please see the Appendix attached to this chapter entitled *Cavan Monaghan Corporate and Community Emissions Inventory*.

### Where do we want to go?

The Cavan Monaghan community is aiming to achieve a 31% reduction in its GHG emissions from the 2011 baseline by 2031. This is equivalent to 17,017 less tonnes of CO<sub>2</sub>e emitted per year by 2031, which would put the Township’s community emissions at 37,514 tonnes of CO<sub>2</sub>e per year by 2031 compared to the current 54,531 tonnes per year.

### How are we going to get there?

The following tables detail the strategies and actions that Cavan Monaghan will use to achieve its community GHG emissions reduction target. Further detail on each strategy is provided in the main *Climate Change Action Plan* document.

#### Our Homes

Strategy H1: Help existing homes become more energy and water efficient and be more adaptable to climate risks	
	Mitigation impact: direct                      Adaptation impact: direct
<b>Primary Action</b>	Support the development of a business case for a comprehensive multi-year deep energy retrofit program focused on existing households to achieve efficiency gains of at least 30% to 50% depending on the age and type of the building. Explore and investigate for Local Improvement Charges (LIC) and/or incentives available through a Community Improvement Plan (CIP).
<b>Primary Action Assumptions</b>	The development of a business case for a comprehensive multi-year deep energy retrofit program would be initiated/led on a regional level i.e. through the City and/or County. The implementation of a LIC program and/or CIP is both financially and administratively feasible.
<b>GHG Emission Reduction Potential</b>	5,107 tonnes of CO <sub>2</sub> e/per year

Strategy H2: Build new homes to be more efficient and have a smaller environmental footprint	
	Mitigation impact: direct                      Adaptation impact: direct
<b>Primary Action</b>	Implement gradual improvement in new home construction that aligns with amendments to the Ontario Building Code aimed at achieving near net-zero or equivalent (0.14 to 0.24 GJ/m <sup>2</sup> ) in all new buildings by 2031. Explore incentives available through a CIP.
<b>Primary Action Assumptions</b>	The Ontario Government implements actions as part of the provincial Climate Change Action Plan particularly, incentives for near net-zero carbon homes,

Strategy L4: Facilitate best management practices for low emission farming and climate change adaptation	
	Mitigation impact: indirect      Adaptation impact: direct
<b>Supporting Actions/ Policies</b>	<b>Supporting Actions &amp; Initiatives</b> <ul style="list-style-type: none"> <li>Promote usage of Agriculture and Agri-Food Canada’s no-cost Holos GHG emissions modeling tool to assist farmers in assessing their GHG emissions and exploring various farm management scenarios</li> <li>Support [local agricultural organizations] to host local agricultural forums and training sessions to engage with farmers on how to implement climate change mitigation and adaptation related best management practices</li> <li>Support [local agricultural organizations] to promote local participation in the Canada-Ontario Environmental Farm Program to encourage farmers to increase knowledge, conduct assessments, and develop and implement Environmental Farm Plans for their farms</li> </ul>
<b>GHG Emission Reduction Potential</b>	2,780 tonnes of CO <sub>2</sub> e/per year <sup>1</sup>

## Our People

Strategy P1: Prepare for the health impacts associated with a changing climate	
	Mitigation impact: none      Adaptation impact: direct
<b>Primary Action</b>	Support the development of a local community vulnerability assessment of public health impacts from climate change to identify climate risks on vulnerable populations (in partnership with all communities).
<b>Supporting Actions/ Policies</b>	<b>Supporting Actions &amp; Initiatives</b> <ul style="list-style-type: none"> <li>Establish a protocol for extreme weather alerts and flooding updates</li> </ul>
<b>GHG Emission Reduction Potential</b>	None

Strategy P2: Foster a culture of climate change awareness	
	Mitigation impact: indirect      Adaptation impact: indirect
<b>Supporting Actions/ Policies</b>	<b>Supporting Actions &amp; Initiatives</b> <ul style="list-style-type: none"> <li>Support Sustainable Peterborough and other local organizations in hosting regular events focused on climate change (speaker series, annual event, etc.)</li> <li>Support Sustainable Peterborough in seeking buy-in and endorsement/support for the shared vision and goals of Community</li> </ul>

<sup>1</sup> Total reduction potential per year based on uptake of anaerobic digesters (biogas), enteric fermentation reduction, changing manure management practices, and adopting best practices for soil management.

Strategy P2: Foster a culture of climate change awareness	
	Climate Change Action Plan from existing groups and organizations in the Greater Peterborough Area <ul style="list-style-type: none"> <li>• Support Sustainable Peterborough to host a community, youth, adult, and senior climate change champion through the annual Sustainable Peterborough Awards</li> </ul>
<b>GHG Emission Reduction Potential</b>	Impact on GHG emissions nominal

Strategy P3: Encourage civic engagement around climate change	
<b>Primary Action</b>	Mitigation impact: indirect      Adaptation impact: indirect Develop a charter and guidelines (engagement strategy) to foster meaningful community engagement in climate change issues and environmental stewardship (partnership amongst all communities).
<b>Supporting Actions/ Policies</b>	<b>Supporting Actions &amp; Initiatives</b> <ul style="list-style-type: none"> <li>• Support Sustainable Peterborough to establish a youth advisory committee on climate change to empower youth to take action on climate change</li> </ul>
<b>GHG Emission Reduction Potential</b>	Impact on GHG emissions nominal

### Decarbonization of the Electric Grid

Since the baseline year of 2011, the Province of Ontario has taken steps to reduce the GHG emissions associated with the electrical grid. For example, it closed all of its coal-fired power plants. This in turn will result in significant GHG Emission Reduction Potential for the Cavan Monaghan community, totalling 4,586 tonnes of CO<sub>2</sub>e/per year.

## Section 3: Corporate Action Plan

### Where are we now?

In 2011, 646 tonnes of CO<sub>2</sub>e were emitted by the Township of Cavan Monaghan’s corporate operations. The business-as-usual forecast for the corporate operations is based on annual growth rates derived from official population projections. Emissions from corporate operations are projected to increase to 770 tCO<sub>2</sub>e per year by 2031 if the Township continued to operate as it did in the baseline year without taking any actions to reduce GHG emissions. For further details on the Cavan Monaghan’s baseline corporate emissions (PCP Milestone 1), please see the Appendix attached to this chapter entitled *Cavan Monaghan Corporate and Community Emissions Inventory*.

### Where do we want to go?

Cavan Monaghan is aiming to achieve a 29% reduction in its corporate GHG emissions from the 2011 baseline by 2031. This is equivalent to 190 less tonnes of CO<sub>2</sub>e emitted per year by 2031, which would put the Township’s corporate emissions at 456 tonnes of CO<sub>2</sub>e per year by 2031 compared to the current 646 tonnes per year.

### How are we going to get there?

The following table details the strategies and actions that Cavan Monaghan will use to achieve its corporate GHG emissions reduction target.

Township of Cavan-Monaghan Corporate Action Plan	Timeframe			
	Underway or Complete	Short (1-4 years)	Med (5-9 years)	Long (10+ years)
<b>Buildings</b>				
<b>Strategy 1: Institutionalize energy efficiency and low carbon thinking into the organization</b>				
Facilitate provincial funded employee training for energy efficiency		X	X	X
Establish a policy to consider highest energy efficiency as part of procurement requirements and evaluation		X		
Monitor incentive programs offered through electricity and natural gas providers to be leveraged for implementing energy efficiency improvements		X	X	X
<b>GHG Emission Reduction Potential: In-direct GHG reductions</b>				
<b>Strategy 2: Enhance operational efficiency of existing buildings</b>				
Implement a building/facility assessment tool/process to explore opportunities for improved efficiency (e.g. annual facility walk through)	X			
Conduct building re-commissioning to optimize operations		X	X	X
Implement/continue to deliver an equipment preventative maintenance program on an ongoing basis	X	X	X	X
<b>GHG Emission Reduction Potential: 16 tonnes of CO<sub>2</sub>e/per year</b>				

<b>Strategy 3: Build municipal facilities to ensure high environmental performance</b>				
Consider the establishment of a Green New Building Policy to require new municipal buildings and major renovations be built to high environmental standards in alignment with Official Plan direction		X		
Install electric vehicle charging stations at new facilities for public use if feasible		X	X	X
<b>GHG Emission Reduction Potential: 36 tonnes of CO<sub>2</sub>e/per year</b>				
<b>Strategy 4: Improve environmental performance of existing municipal facilities</b>				
Consider implementing an interior and exterior LED lighting retrofit program in all facilities where feasible	X	X	X	X
Replace appliances with Energy STAR rated appliances as needed	X	X	X	X
Upgrade insulation/building envelope while conducting other essential building work (e.g. asbestos removal) where feasible		X	X	X
Replace windows and doors with high efficiency according to replacement schedule/need		X	X	X
Replace mechanical equipment with high efficiency according to replacement schedule/need		X	X	X
<b>GHG Emission Reduction Potential: 67 tonnes of CO<sub>2</sub>e/per year</b>				
<b>Strategy 5: Utilize renewable energy sources</b>				
Continue to install solar photovoltaic panels and other renewable energy options when feasible	X	X	X	X
<b>GHG Emission Reduction Potential: 3 tonnes of CO<sub>2</sub>e/per year</b>				
<b>Fleet</b>				
<b>Strategy 6: Transition the municipal fleet to be more efficient and less carbon emitting</b>				
Consider the development and implement a Green Fleet Strategy and replacement schedule				
<ul style="list-style-type: none"> <li>Right sizing vehicle/appropriate vehicle class (fit-for purpose vehicles) through replacement schedule</li> <li>Transitioning to low emission and alternative fuel vehicles (e.g. clean diesel, advanced natural gas, ethanol, or hybrid)</li> <li>Use of anti-idling technology</li> <li>Fuel and vehicle performance monitoring</li> </ul>		X	X	X
Develop and implement a no idling policy	X			
Implement an operator training and education program (e.g. eco driving)		X	X	X
Continue with preventative maintenance program for vehicles and equipment	X	X	X	X
<b>GHG Emission Reduction Potential: 101 tonnes of CO<sub>2</sub>e/per year</b>				
<b>Water Services</b>				
<b>Strategy 7: Enhance operational efficiency of the water services system</b>				

Maintain mechanical equipment at the Millbrook Wastewater Treatment Plant as part of the expansion	X			
Review and optimize pumps and blowers	X			
Continue to deliver preventative maintenance program			X	X
Continue to deliver operator training and education program	X	X	X	X
Continue to monitor and track energy performance	X	X	X	X
<b>GHG Emission Reduction Potential: 8 tonnes of CO<sub>2</sub>e/per year</b>				
<b>Streetlighting</b>				
<b>Strategy 8: Improve energy efficiency of the streetlighting system</b>				
Implement LED street lighting and parking lot lighting replacement program	X	X		
<b>GHG Emission Reduction Potential: 7 tonnes of CO<sub>2</sub>e/per year</b>				
<b>Solid Waste</b>				
<b>Strategy 9: Reduce the amount of organic waste generated through municipal operations</b>				
Continue to participant in the office waste diversion program	X	X	X	X
Consider implementing office organic waste diversion through use of backyard composters in conjunction with community gardens			X	
Implement staff education and awareness program related to waste minimization and diversion			X	
Explore source separation of waste in public areas (e.g. parks, downtown)				X
<b>GHG Emission Reduction Potential: 13 tonnes of CO<sub>2</sub>e/per year</b>				

### Decarbonization of Electricity Grid

Since the baseline year of 2011, the Province of Ontario has taken steps to reduce the GHG emissions associated with the electrical grid. For example, it closed all of its coal-fired power plants. This in turn will result in significant GHG Emission Reduction Potential for Cavan Monaghan's corporate emissions, totalling 65 tonnes of CO<sub>2</sub>e/per year.
